

RESIDENTIAL, COMMERCIAL & INSTITUTIONAL SERVICES

24 HOUR MONITORING

An electronic security system, fire alarm or surveillance camera is only as good as the person who is there to react to any signal they receive from the equipment. Most homeowners and business people are not going to be on site 24 hours a day 7 days a week. In order to protect yourself and your property during these absences a monitoring service should be notified automatically by your alarm equipment. Summit Security offers our clients individualized 24 hour monitoring service for their security, fire and CCTV systems. Each client has their own specific need when it comes to the monitoring of the equipment in their home or business. By tailoring our monitoring to your needs, we can provide several options at various rates and terms. With this customizing of our service we can solve any of our clients monitoring issues and help secure their property around the clock.

3 MONTHS OF FREE MONITORING

Summit Security & Electronics, LLC is now offering **3 free months** of security system monitoring to qualifying homeowners. Whether you currently own a home security system or would like to have one installed, we can provide you with service which is second to none. Call today for a free, no obligation survey of your home.

SUMMIT SECURITY'S GUARANTEE

At Summit Security we are dedicated to you, our client. We guarantee prompt, friendly and professional service to all of our clients day or night. Whether installing equipment in a new construction or taking over service on an existing facility, it is our goal to meet your high expectations. The best advertisement we as a company can have is word of mouth from our satisfied clients to our future ones. Please contact us with any questions or inquiries you may have and we look forward to working for you.

SERVICE AND EXPERIENCE MAKE THE DIFFERENCE

Summit Security & Electronics, LLC is at the forefront of the ever-changing electronics industry. Locally owned and headquartered in West Monroe, Louisiana, Summit Security was founded on the belief that each of our clients is deserving of prompt, professional and personalized service. Whether you are a homeowner or the CEO of a major corporation, we strive to meet and even exceed your expectations by supplying high quality, competitively priced equipment installed and maintained by friendly, knowledgeable service technicians. Summit Security's list of satisfied customers includes homeowners, small business owners, school systems, correctional institutions, medical facilities, industrial businesses and numerous building contractors. We are a full service provider who can design, install, and maintain multiple low voltage electronic systems. This capability allows our clients to simplify their lives by limiting the number of firms which they are required to call to address their needs.

In order to provide the highest quality service to our clients, Summit Security hires only the most professional and knowledgeable technicians to become part of our service team. Each of our employees undergoes continuous training both in the field and the classroom to increase their ability to perform their duties at the highest level as well as to satisfy the requirements of our licensing agencies. When a client contacts Summit Security they feel the added security of dealing with a fully licensed and insured firm. Should a client require additional safety training or other qualifications in order for us to provide services to their facility, we are capable of conforming to meet those requirements and get the job done.

Because we are such a diverse firm, Summit Security is capable of providing our clients with various systems including, but not limited to commercial and residential security alarms, CCTV systems, fire alarms, intercom and paging systems, access control, nurse call, school bells, central vacuums and telephone/data cabling. These systems vary in their uses according to the classification of the facility in which they are installed whether it is residential, commercial, industrial, educational, health care and so on. Each project presents its own unique requirements which must be addressed on an individual basis. There is no singular "cookie cutter" system which will be most effective in every circumstance. For this reason, we offer our clients a free survey and consultation regarding their facility and the service which they desire to have provided to them. There is no obligation to retain the services of Summit Security in order to receive an honest and straight forward assessment of your project along with a competitive price to provide you with the equipment best suited to you and professional service to back it up.

RESIDENTIAL SERVICES

Each of us regards our home as a place to enjoy to the company of family and friends and relieve ourselves of the pressures of daily life. Few things can match the emotions felt when your home is violated by an intruder. Whether it is due to the loss of cherished possessions or the cost of repairing a vandalized home, the effects of a break in can last for some time. By installing a custom designed, professionally installed electronic security system the odds of your home being targeted by a criminal can be greatly reduced.

Today's home security systems are easy to use, aesthetically pleasing and most importantly effective. Summit Security will satisfy your needs by providing a security system designed to secure your family as well as your property. Not only will your home be protected from intruders, but with the addition of smoke, carbon monoxide, temperature and water detectors your security system can alert you to other hazards as well. In addition to the peace of mind provided by an electronic security system many insurance providers offer rate reductions to their clients who have their homes protected thereby putting money back into your pocket. Obviously the optimal time to install a security system is during the construction of new home, unfortunately this is not the case with the majority of homes. With the

extensive growth in the security industry toward wireless technology even clients with existing homes are able to have a reliable home security system installed at a reasonable price. With the numerous benefits provided by a home security system and the countless options available to upgrade and customize there is no reason that each and every home, no matter the age or size should go unprotected. Whether you live in an apartment, manufactured home or a spacious custom built home, we can design a home security system that is right for you.

In addition to security systems, Summit Security offers homeowners and homebuilders custom designed intercoms, central vacuum systems, surveillance cameras and telephone/data cabling. Each of these various systems can be built to suit your individual requirements and provide additional comfort and security to your home.

COMMERCIAL SERVICES

Summit Security can provide your business with electronic systems to protect your investments and make your life easier. The single most devastating event in the life of business is a fire. In a matter of moments a fire can destroy years of work and negatively affect the lives of the business owners, employees, clients and many others. The installation of an automatic fire alarm system can greatly decrease the amount of damage caused during a fire by alerting persons on site or even remotely to the existence of the fire. We will provide a full survey of your facility and design a fire alarm system which is compliant will all codes which affect your location. After installation, your new fire alarm system will be tested to insure proper operation and you will be trained on the day to day use of the equipment. Scheduled maintenance of your fire alarm will be fulfilled as required by law as well as any service needs which may arise.

Studies have shown that a business which is not protected by an electronic security system is significantly more likely to be burglarized than those which have a security system. An electronic security system allows a business owner or manager to protect their merchandise and equipment even when the facility is unoccupied thereby reducing the cost of lost product and vandalism.

When combined with a CCTV surveillance system not only can a facility be protected from an unauthorized intruder there is now a video record of what occurred at the site. The days of time lapse video recorders and stacks of video tapes are all but over. Today's digital recorders are capable of storing tremendous amounts of video footage and can be viewed from anywhere in the world by way of the internet. From a simple single camera installation to a complex, fully integrated, facility-wide, multi-camera system, we can provide you with the level of equipment to fit your needs and your budget.

Many businesses require the ability to track the movement of employees and visitors into, out of and through their facilities. In these instances an access control system is called for. By installing locking devices on the doors to various areas of the facility, an employer can control who goes where and when. Each employee is provided with a unique code or card which will limit their ability to enter certain areas determined by the client. If required, systems may also be designed to provide an activity log. Many of these access control systems can be accessed from anywhere via the internet which adds to their convenience of use.

Summit Security can also assist your business' daily operations by installing a quality intercom and paging system. Many facilities struggle with being able to reach employees who may be away from their desk or work in a warehouse, outdoors, or out of reach area. A custom designed intercom system with paging capabilities can fill this void and increase your productivity.

INSTITUTIONAL SERVICES

The educational and health care fields provide unique requirements when it comes to electronic equipment. Our schools rely on many of the same products as commercial businesses with some additions. Fire alarms, security systems, access control and CCTV are all used from daycare facilities up to university campuses. Additionally in order to operate effectively, schools require high quality intercom systems as well as bell ringers both of which help to move students throughout the facility in an orderly manner. Summit Security can meet the expectations of school administrators regarding all of the above systems.

We provide design, installation and service of multiple systems from several manufacturers in order to serve numerous school systems.

Nurse call systems are critical to any health care facility. With so many patients and so few health care workers, it would be impossible to provide a quality environment without a reliable nurse call system in place. We are dedicated to assisting health care providers—nursing homes, hospitals, clinics or other facilities—in giving their residents and patients the equipment they deserve to keep them safe.
